The Problem

Management need a detailed view of productivity for each process under their control, as well as an overview of their department. Similarly, every CEO wants to know what's going on in their business - without having to spend time on the factory floor...

The Solution

Integrator's dashboard tool allows managers in each part of the production cycle to easily monitor process-specific performance. It can be configured to measure whatever data is most important to each department and features a 'drill down' function for detailed analysis.

The dashboard also provides CEOs with highly visible and consolidated information. This ensures that they always have an accurate, real time overview of their business's performance - wherever they are.

The Result

Integrator's dashboard tool gives management complete visibility across the processing cycle. This means that problems can be easily identified and resolved, improving productivity. Owners and board members also have an accurate view of the factory floor, enabling them to focus on long term objectives and strategy.

Major Benefits

- complete visibility
- greater control
- real time view
- greater understanding

Product Features

- electronic data management
- automated analysis, calculations and reports
- simple colour-code technology

What is Integrator®?

Integrator® is an **enterprise manufacturing execution system**, also known as an **e-MES**. The unique solution works by ensuring that management have the visibility to achieve greater accuracy, efficiency and traceability. It effectively holds a magnifying glass up to your processing cycle, so that you can see exactly what's going on and identify where you need to make improvements.

How is it different?

Integrator® has been developed by professionals from the food processing industry and offers more functionality than a standard Manufacturing Execution System (MES).

Enterprise Resource Planning (ERP) software is too generic for food production and often requires users to adhere with a set of standard practices. To solve this problem, **Integrator®** has been developed to account for all the variants and complexities that are specific to the food processing industry. It integrates with your business model to ensure that you can improve performance, without jeopardising your unique selling points.
