outer case marker (OCM)

The Problem

Food processors produce cases of product which need to be weighed, labelled and shipped efficiently. They need an affordable solution which is easy to maintain, but can cope with their specific business requirements.

In terms of functionality, management need to be able to set product selection screens to their own specification. Users also need to be able to add and remove products, as well as group them into colour coded categories and produce high quality labels

The Solution

Integreater's OCM is high quality and durable. The standard model comes with a variable-height frame, mast, load cell and touchscreen, as well as a printer and scale indicator. The unit is provided fully assembled and can be tailored to your specifications. For example, you may want additional printers, an IP65 rated printer garage, or a swing arm for the screen.

The touchscreen is used for running Integreater's OCM software, which will provide you with all of the functionality that you need. Once we have built the unit and configured it to your specifications, we will design any labels that you require and set up your products on the system. The unit will then be shipped to you and one of our engineers will install it, test it and provide training at both operator and administrator levels.

The Result

Operators are able to accurately weigh and label products, with speed and ease.

Production quantities for each product are sent to the OCMs on the factory floor. This information is grouped by run number, so that target quantities and progress can be displayed on the touchscreen. Operators will now know how many cases are outstanding for each run, as well as what has been completed. This enables your business to improve traceability, organisation, productivity and efficiency.

Complimentary Products

If you invest in our Stock & Despatch system, the OCM can automatically book your products into stock - ready to be despatched. When used in combination with our Planning & Availability module, Integreater's OCM is also capable of linking to a prepared plan.

Our OCM and Frame

Our Premium OCM with Touchscreen, Load Cell, Indicator, Label Printer and Printer Garage

Major Benefits

- dual weighing platform capability
- Windows platform & SQL 2000 Server Database
- IP67 rated PC based 17" touchscreen
- food industry compliant
- a range of printers can be utilised, including network, USB and wireless models
- unlimited PLU, Hotshot & Groupings
- maximum 48 x Hot Keys per page (unlimited number of pages)
- centralised PLU, run against Group Wide Central PLU files (even over a WAN or VPN)
- supports up to 4 printers, in any mix of printer or configuration
- network ready as standard
- works stand alone / off line
- web-based OCM tracking tool and reporting
- capable of producing to order (links to Sales Order Processing and production plans)
- one-touch break time recording facility (links to OEE initiative)
- user defined fields can be satisfied manually or direct from scan

Auto OCM

Our OCM software can also be used with an Auto OCM setup. We can supply weigh scale conveyors and label applicators which can interface with the software. This provides you with a solution which will save on resource and maximise your throughput. We usually provide a bespoke solution for Auto OCM setup.

What our customers say...

*"I would recommend **Integreater®** to other food processing businesses as its OCMs are unique, operating in isolation. This allows individual stations to continue to function, even if there is a network problem".*

*"Their touch screen technology is easy to use, taking less than 10 minutes to train operating staff. In combination, this minimises disruption and increases efficiency, which is vital to the productivity of any business". **Steve Wallace, IT Manager, Seachill.***

What is Integreater®?

Integreater® is an **enterprise manufacturing execution system**, also known as an **e-MES**. The unique solution works by ensuring that management have the visibility to achieve greater accuracy, efficiency and traceability. It effectively holds a magnifying glass up to your processing cycle, so that you can see exactly what's going on and identify where you need to make improvements.
