performance & improvement

benchmarking

The Problem

We all know that we have the potential to achieve greater productivity - but in a busy food processing environment, management rarely have the time to accurately benchmark their performance.

The Solution

Working in conjunction with our KPI measurement tool, Integreater's benchmarking software allows processors to set business-specific targets to measure their performance against.

Management are able to continuously assess productivity and if benchmarks are not being met, this tool can be used with Integreater's OEE software to identify the reasons why.

The Result

Management can measure and benchmark the data that is most important to their business, allowing them to easily spot any problems. This reduces the potential of future issues and improves long term performance.

recalibrate your
profitability |

Major Benefits

- identifies problems
- improves productivity
- compares production against plan
- improves reaction lead times

Product Features

- electronic data management
- automated analysis and calculations
- simple colour-code technology
- automated reporting and distribution

What is Integreater®?

Integreater® is an **enterprise manufacturing execution system**, also known as an **e-MES**. The unique solution works by ensuring that management have the visibility to achieve greater accuracy, efficiency and traceability. It effectively holds a magnifying glass up to your processing cycle, so that you can see exactly what's going on and identify where you need to make improvements.

How is it different?

Integreater® has been developed by professionals from the food processing industry and offers more functionality than a standard Manufacturing Execution System (MES).

Enterprise Resource Planning (ERP) software is too generic for food production and often requires users to adhere with a set of standard practices. To solve this problem, **Integreater®** has been developed to account for all the variants and complexities that are specific to the food processing industry. It integrates with your business model to ensure that you can improve performance, without jeopardising your unique selling points.
