business analysis

The Problem

Management understand the importance of business analysis, but rarely get chance to undertake this critical task.

Business analysis is not traditionally viewed as being part of the processing cycle. It's often performed on an ad-hoc basis, usually a last minute scrabble around audit time - or on the rare occasions when management have a spare moment.

The Solution

Integrator® ensures that this important task becomes part of the processing cycle. It works by integrating with your production network to automate the continuous measurement and analysis of essential data.

Processors are able to quickly and easily dissect any measured result, including yield, throughput, product giveaway and pack-fill. Information can be viewed in real time, or for a specific date/time range.

The Result

Integrator® takes all the hard work out of business analysis, providing management with the knowledge and visibility to make informed decisions and set realistic objectives.

Major Benefits

- process is integrated into production cycle
- complete visibility
- greater foresight
- improved planning
- greater understanding

Product Features

- electronic data management
- automated analysis and calculations
- simple colour-code technology
- automated reporting and distribution

What is Integrator®?

Integrator® is an **enterprise manufacturing execution system**, also known as an **e-MES**. The unique solution works by ensuring that management have the visibility to achieve greater accuracy, efficiency and traceability. It effectively holds a magnifying glass up to your processing cycle, so that you can see exactly what's going on and identify where you need to make improvements.

How is it different?

Integrator® has been developed by professionals from the food processing industry and offers more functionality than a standard Manufacturing Execution System (MES).

Enterprise Resource Planning (ERP) software is too generic for food production and often requires users to adhere with a set of standard practices. To solve this problem, **Integrator®** has been developed to account for all the variants and complexities that are specific to the food processing industry. It integrates with your business model to ensure that you can improve performance, without jeopardising your unique selling points.
