key performance indicators
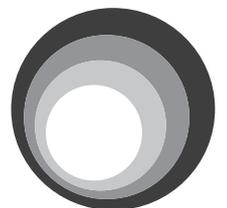

recalibrate your profitability

integreater
performance & improvement

The Problem

Although management are always looking to improve performance, measuring productivity is often retrospective and undertaken separately to the processing cycle. This can be time consuming and prone to error.

Despite being an extremely important function, monitoring performance can be ad-hoc. It often takes a back seat to seemingly more pressing issues, such as meeting last minute order changes.

The Solution

Integreater® enables food processors to continuously monitor productivity. Management set key performance indicators for their business and the **e-MES** then integrates with the processing cycle to measure the relevant data.

Information is presented in real time using simple colour-code technology. This allows operators to easily identify and rectify any issues that are affecting performance.

The Result

Management have an accurate, up-to-date view of performance and are able to identify any trends. In order to understand the reasons behind performance issues, the KPI module can also be used in combination with Integreater's **Business Analysis** and **OEE** tools.

Major Benefits

- process is integrated into production cycle
- improves visibility
- compares production against plan
- improves reaction lead times

Product Features

- electronic data management
- business specific KPIs
- automated analysis and calculations
- simple colour-code technology
- automated reporting and distribution

What is Integreater®?

Integreater® is an **enterprise manufacturing execution system**, also known as an **e-MES**. The unique solution works by ensuring that management have the visibility to achieve greater accuracy, efficiency and traceability. It effectively holds a magnifying glass up to your processing cycle, so that you can see exactly what's going on and identify where you need to make improvements.

How is it different?

Integreater® has been developed by professionals from the food processing industry and offers more functionality than a standard Manufacturing Execution System (MES).

Enterprise Resource Planning (ERP) software is too generic for food production and often requires users to adhere with a set of standard practices. To solve this problem, **Integreater®** has been developed to account for all the variants and complexities that are specific to the food processing industry. It integrates with your business model to ensure that you can improve performance, without jeopardising your unique selling points.
